

LearnStar - How to Connect to Document

Now that all of the classrooms who use LearnStar have document cameras connected to the ceiling mounted projectors, it will be simpler to use the LearnStar through them. The LearnStar projector has been moved to storage for use during meetings or as a backup. Contact your principal, if you need to use this projector.

1. Find the blue VGA cable connected to the LearnStar laptop.

2. Locate the door on the right side of the document camera.

3. Open the door to find the RGB In port.

4. Plug blue-ended VGA cable from laptop into the blue RGB In port.

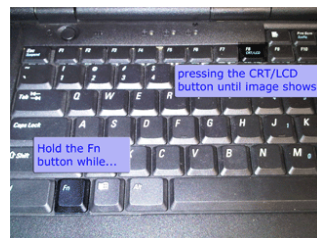

5. Press the CCD/PC1/PC2 button until it turns red.

6. Turn on the LearnStar laptop and your projector. You should see the image from the LearnStar.

If the LearnStar laptop image does not show, you may need to hold the Fn button while pressing F8 until it does.
